CSSI Expands Washington Footprint to Accommodate Growth

Washington, DC – CSSI, Inc., a leading engineering, information technology and applied research company, recently moved into office space at the new Capitol View building at 425 3rd Street, SW, expanding its presence in the city by 20,000 square feet.

“This is an exciting time of growth and opportunity for our company, and this new space represents that,” said Cynthia Castillo, CSSI president and CEO. “We selected the location carefully to meet customer and employee needs now and into the future, and we know it will serve us well.”

CSSI held a ribbon-cutting ceremony at Capitol View to welcome customers, teammates and friends and to the space. The event capped a year of milestones for CSSI, including the company’s 20th anniversary, winning the largest contract in its history, and welcoming almost 100 new employees.

Today, more than 300 CSSI employees work from 70,000 square feet of leased office space in several locations, including Washington, DC, Maryland, New Jersey and South Carolina.

Growth and Transformation

CSSI has been a trusted contractor to the Federal Aviation Administration (FAA) for more than 20 years, providing comprehensive engineering services for some of the agency’s most critical programs.

Founded in 1990 as a provider of air traffic management technical services, the company has successfully grown from Small Business Administration 8(a) status to a full and open competitor serving the aerospace, defense, and transportation sectors.

CSSI has grown considerably in the past year alone. Last spring, the FAA awarded CSSI a \$280 million systems engineering contract to help transform and modernize the nation’s airspace system into the Next Generation Air Transportation System (NextGen).

In the fall of 2010, CSSI won a \$124 million contract to support the FAA Air Traffic Organization’s (ATO) Office of Safety. Under this contract, CSSI is helping the ATO accomplish its overall mission to improve safety and reduce risk in the National Airspace System (NAS).
